

# Installation Warning Systems

## Giant Voice (GV) Siren System

(3-5 Minute Steady Tone)

### Disaster Warning

(i.e., Thunderstorms, Tornadoes, Flash Floods, Hazardous Material Release.)

(3-5 Minute Wavering Tone)

### Attack Warning

(i.e., Shooter, IED/VBIED, FPCON Increase.)

- \* Ensure all personnel are notified and accounted for.
- \* Listen to and follow Warning System instructions.
- \* Possible disaster actions include evacuation, Shelter In-Place (SIP) or relocation to Joint Base shelters.
- \* Possible attack actions include evacuation, staying indoors to take cover and increasing appropriate security measures.
- \* **Bottom line, stay informed and take appropriate actions.**

The following notification systems broadcast valuable information to the base.

At a minimum, units must notify all personnel, perform accountability and report to Unit/Group Control Centers, the Command Post (609-754-3935) or Joint Base Communication Center (JBCC) (609-754-0990)

### AtHoc Alert System

Is a message alerting system that sends texts, emails, and phone calls to registered base population

### Desktop Alert Station

Appears on McGuire government computers connected to the network. Window remains displayed until user closes the box.

### 1650 AM Radio Station

When the lights on posted warning signs are flashing, tune your radio to 1650 AM to receive urgent information. Continue monitoring until the event has been terminated and the all clear announced. NOAA weather radio continuously plays until an urgent message is broadcast.

### Share Point Site

You can also become a member of the "JB MDL Office of Emergency Management Share Point site.
